**Vulnerability Management gap analysis – identify & address current weaknesses**

**Review current configurations & remediation processes**

**Review Alerts, Reports & Dashboarding mapped to your environment**

***All At NO Cost!***

## How The Health Check Works

When you engage Satisnet Professional Services to perform your Health Check we will work with you to understand the primary business use for your solution, how your security team uses the solution to meet these goals and how it fits into your organization's overall security model. Throughout our engagement we will ensure that any recommended changes align with your business goals as well as your IT Security goals.

We'll also help you fine-tune many different aspects of your deployment. These include solution performance, resource usage, configuration, scan policies, reports, and dashboards.
