

Satisnet Security Gap Analysis

Satisnet provides a gleamed GAP analysis aimed at highlighting where companies should focus their Cyber Security programme and resources based on the CIS Top 20 security controls with some additional checks deemed from our many years of experience. The Gap Analysis reviews and assesses the current policies, technical controls and general governance standards in place that support a organisations IT Environment and Data Security.

The review encompasses an assessment of:

- Governance, policies, processes and standards.
- Adherence to standards e.g., GDPR, ISO27001 & NIST.
- Security architecture.
- Security controls and tools.
- Operational IT Security.
- Monitoring, Management, and Incident Response.
- General Security Awareness & Training.

Benefits of a Gap Analysis

- Prioritise projects you should focus on, e.g. SIEM, Vulnerability Management / Patch Management.
- Identify clear, practical, strategic measures to protect your business data.
- Identify any holes in your current technical security programme and objectively prioritise their closure.
- Benchmark your security processes and performance.

Where to focus Cyber Security

- Review of existing security controls, processes, and tools
- Detailed security posture report
- Recommended remediation steps
- Roadmap and proposal report
- Guide to required tooling and costing
